Architectural Electronics Systems For Your Home

Premier Designs is an Electronics Systems Contractor who provides high-end Architectural Design and turnkey Project Management services to upscale Residential Customers. We work with you to compliment your Architect, Building General Contractor or Remodeler and Interior Designer to enhance your vision for your home. Our customers depend on our knowledge, experience, and ability to provide the "whole product" rather than just the ingredients. They require a high level of professional services in order to meet their expectations for complex integrated solutions that need to be reliable, affordable, and simple-to-use while enhancing the aesthetics of their home.

Design Beautiful and Simple.

Premier was founded in 1999 by DePauw University graduates Jason Barth, Matt DeVore, and Tay Bourquein. Capitalizing on more than 40 years combined experience in the Custom Installation Industry among the three founding co-owners, their knowledge and experience has earned them top accolades in the industry, consistently ranking nationally in the top tier of professional custom electronics design & installation firms.

Premier has also proven to be a trustworthy company. Their quality of work speaks for itself, with design and installation standards that are of the highest degree. A highly customer service oriented business model and a great team surrounding them, they have cultivated a company that shares their approach, and a vision that is admired and respected by their peers in the industry.

Jason leads the Design Team. Upon first impression, his passion for his work is evident. His knowledge of the most technologically advanced private home theater systems, distributed audio & video systems, lighting, shade and climate automation, security systems, and simple intuitive networked communications and control systems has earned him a reputation for providing high-end home entertainment and automation solutions that are both enjoyable and simple to use. Jason looks forward to meeting every new client with the same enthusiasm and energy with which he began his career.

Utilizing an artful combination of conventional and uniquely designed products, the Design Team is able to craft systems that meet the highest performance requirements yet blend invisibly and seamlessly into your decor.

Project Management

A process of precise documentation and clear communication.

As an electronics systems contractor, Premier Designs excels at providing the "whole product" rather than just the

ingredients. By assessing each customer's individual needs and desires, and by exhibiting expert installation and support, Premier provides a level of simplicity that we believe has been lost in the technology sector. Our comprehensive turnkey solutions require a strictly organized team approach with regards to detailed product knowledge, proper system design and engineering, project estimation, project management, installation ability, programming standards, and serviceability.

A truly successful project hinges on great Project Management. Since today's home automation systems "touch" virtually every sub-system in the home, such as home theaters, media rooms, climate, lighting control systems, motorized drapery/shades, pool, security, CCTV camera systems, gates, etc, careful coordination is required to ensure that all of the details of the project are planned in advance with the other sub-contractors on the project.

Most custom audio video installation companies do not have dedicated project managers. Instead, the employees may be required to

multi-task and serve many different roles within the company. This inevitably leads to missed communication, or slow response in returning important phone calls or e-mails. Premier's Project Management team does not suffer from this common problem; instead, many General Contractors praise us for being proactive and responsive to their communication.

Matt DeVore (managing partner) leads the Project Management Team and maintains a firm commitment to continually develop a process of standards and procedures for these rapidly evolving technologies. Utilizing his skilled team members, he provides project clarity through a disciplined process of precise documentation and clear communication in order to achieve "complete customer satisfaction." From the moment you contract your project with Premier Designs, Matt's hands on approach, and his ability to communicate efficiently and effectively with his staff and with your architect, interior designer, general contractor, and other sub contractors, greatly enhances the collaborative installation process.

This helps ensure your project is completed on time and on budget, with no surprises. Our Project Management team's goal is that your finished installation is uncompromised. The fit and finish will be excellent, and the entire process from design through completion will be a happy, harmonious experience for all involved.

Audio & Video

Home Theater, Surround Sound, Home Audio, Media Systems & Game Rooms

Experience the Ultimate Home Theater. For those with the means, there are numerous investment options to encourage more family time together. One option that's really an expectation in luxury homes is a home theater or a media room. Unfortunately, too often the audio/video equipment defines these rooms, without regard for room acoustics, interior design or proper placement of the equipment. You do have a choice. You can invest in a room that's much more than just a home theater; it's everyone's new favorite room. We call it your Personal Theater. What is a Personal Theater? Movies better than any Cineplex? Front row seats at the concert? Football on the 50 yard line? The ultimate video arcade? A recital

stage for your child? Slumber party paradise? Yes!

Personal Theaters require tremendous expertise in a wide variety of disciplines such as architecture, ergonomics, construction, acoustics, sound isolation, electronics, automation, seating, and lighting. The resulting rooms are amazing both in appearance and performance.

Personalize your room by changing colors or column and soffit details. Add sconce or recessed lighting, or include a customized, modular front cabinet that hides your speakers and electronics. High quality theater seating is not only comfortable and finely crafted, but it is beautiful as well. Check out our website's [Design Gallery](#) for a wide variety of ideas to make your Personal Theater a reality!

Lighting, Shades & Climate Controls

Automating Décor

Automatically or manually adjusting your home lighting and climate systems using touch panels and keypads, or from any PC, Mac or mobile device provides a high level of comfort, security and convenience. It also benefits your wallet by lowering your consumption and saving energy while reducing your impact on our environment. Completing the lighting control system and delivering the most effective energy management solution, motorized shades elegantly blend designer window treatments with intelligent room control. Premier offers shades that are available in a choice of hundreds of fabrics, including sunscreen, privacy and blackout shades. A variety of styles and opacity ensure the perfect solution for any room. Whether you want to keep light in or out, optimize natural light in the room or reduce solar heat gain, shades are the right solution to complete your lighting control and energy management system. Finally, state-of-the-art LED lighting solutions are now available for new construction, or to replace many of the existing fixtures found in homes.

Home Security

Alarm, Access Control & Camera Systems

Burglar, Fire & Medical Safety

You and your family can enjoy peace of mind 24 hours a day, 7 days a week. In the event of a burglary, fire or other emergency, highly trained home security monitoring professionals are always standing by, ready to dispatch the proper response personnel at a moment's notice. Our advanced alarm communications make sure your signals get through whether you're a cell phone-only residence, have VoIP phone service from your cable company or rely on a traditional landline. Your home remains protected if the phone line is cut, the Internet is interrupted or the power goes out. In addition, your security system can instantly turn on indoor and outdoor lights so you always arrive to a well-lit home, program lights to strobe on and off during an alarm to enhance security and create on and off schedules to simulate a lived-in look when you're away.

Keypad & Biometric Recognition Door Lock Entry Systems

Now, you can lock your door remotely via a mobile device or secure Internet connection; you can check the lock status and even receive notifications of who enters your home and when. That is possible via access codes that you can even add and remove remotely - multiple user management, for family permanent access or limited access for temporary use according to certain situations. Friends sleeping over don't have to bother to come bring you the key, nor need you meet them and take back your key - or even friends from other cities, just send them to your place and have the door open in front of them with nobody home.

Other features of the system are the interoperability with different Home Control Systems so you can customize lighting scenes upon entrance.

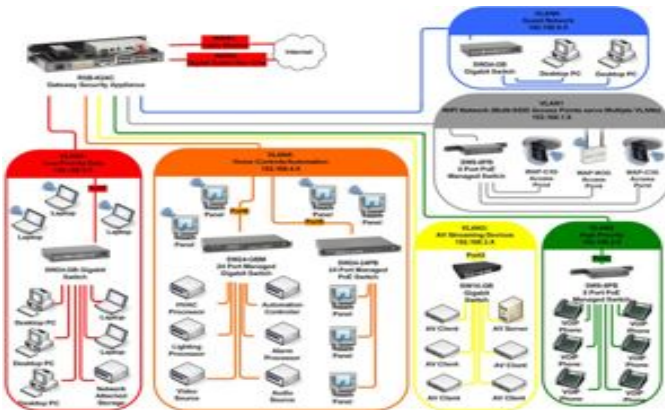

Camera Surveillance

Integrate cameras with security for the ultimate piece of mind. Watch live, streaming video on multiple camera's at a time and receive videos and images of events occurring around the interior and exterior of your home on your PC or Mac, Android, Blackberry, iPhone, iPad, iPod Touch or any compatible mobile device! Our camera's are portable and can be placed anywhere on the premises. IP cameras can be connected wirelessly and simply require power. Infrared camera's provide perfectly clear images during the day, but activate their night vision capabilities to see amazingly well in low light, nighttime conditions. Finally, seamlessly record video to a DVR hard drive in order to review later, should an incident occur, and easily burn video and images to a DVD for the police or your insurance company.

Communications & Control

Wired and wireless networks combined with automation and control systems form the network hub for your home.

Wired & Wireless Home Networking

Today's modern devices include smart phones, tablets, laptops, portable music players, Blu-ray DVD and media players, game systems, HD televisions, and even home appliances. They all require Internet connectivity. A robust and reliable high-speed wired and wireless network is the backbone that supports all of your family's daily activities. From work or school, to home entertainment options including streaming content from Netflix, iTunes, Rhapsody or other music and video services, it's the network that makes it happen.

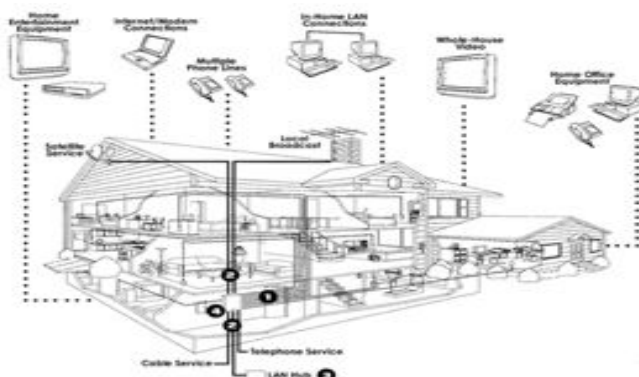

Touch Panels, Keypads & Remotes

Simple-to-use interfaces include wireless remotes and portable or in-wall touchscreens that allow for easy access to whole-home music, video, lighting, climate, shades, and security systems. One touch of a custom button such as "Goodnight" might turn off the lights, shut down the TV's and sound, set back the thermostat and arm the security system. Safety & Convenience, all from one touch!

Mobile Control & Broadband Home Management

Mobile devices are our preferred method to stay connected. Why not connect your smart device with your home! Whether you are "home" or "away" your iPhone/iPad, Android or other smart phones, portable PC's and Mac's can quickly and seamlessly be integrated to connect you to your home and help you manage devices including your lights and thermostats in order to save energy. You can even receive automatic notifications via simple user managed e-mail alert settings.

Structured Wiring

A comprehensive wiring infrastructure, including proper interface cables, is the most valuable method to distribute audio & video signals, communications and controls. While many technologies can be implemented with "no new wires," electronic components always require power. Low voltage wiring is often the most efficient, reliable and cost effective way to deliver the proper signals and provide the necessary current.
